This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) An information processing apparatus comprising:

storage means for repeatedly storing data in a plurality of given states each time said data is created or changed, wherein each of said given states is based on time information corresponding to a day and time at which said data is stored;

an application program for performing a corresponding application, and transmitting and receiving time of application in which the application corresponding to said application program is performed, to and from another application program;

day and time setting means for setting ~~a desired~~ the day and time based on said time of application received from said another application program; and

control means for locating data stored at said set day and time based on said time information and for reproducing said given state of said data corresponding to said set day and time.

4. Canceled.

5. Canceled.

6. Canceled.

7. Canceled.

8. Canceled.

9. Canceled.

10. (Currently amended) An information processing apparatus according to claim 1, wherein said storage means stores ~~an~~ the application program, ~~which is capable of transmitting and receiving time information, said day and time setting means sets said day and time on the basis of the time information received from another application program,~~ and said control means reproduces the state of the application program corresponding to the set day and time.

11. (Currently amended) An information processing apparatus according to claim 10, wherein said day and time setting means sets the day and time closest to said receive time ~~information~~ of application.

12. (Original) An information processing apparatus according to claim 10, wherein said application program contains a file management program for managing files.

13. (Original) An information processing apparatus according to claim 10, wherein said application program contains a position and time information management program for managing input position information and the time information corresponding to the position information.

14. (Currently amended) An information processing method comprising the steps of:

repeatedly storing data in a plurality of given states each time said data is created or changed, wherein each of said given states is based on time information corresponding to a day and time at which said data is stored;

transmitting and receiving time of application in which an application corresponding to an application program is performed, to and from another application program;

setting ~~a desired~~ the day and time based on said time of application received from said another application program;

locating data stored at said set day and time based on said time information; and reproducing said given state of said data corresponding to said set day and time.

15. Canceled.

17. Canceled.

18. Canceled.

19. Canceled.

20. Canceled.

21. Canceled.

22. (Currently amended) An information processing method according to claim 14, wherein ~~said storing step stores an application program which is capable of transmitting and receiving time information, said day and time setting step sets said day and time on the basis of the time information received from another application program, and~~ said control step reproduces the state of the application program corresponding to the set day and time.

23. (Currently amended) An information processing method according to claim 22, wherein said day and time setting step sets day and time closest to said received time ~~information~~ of application.

24. (Original) An information processing method according to claim 22, wherein said application program contains a file management program for managing files.

25. (Original) An information processing method according to claim 22, wherein said application program contains a position and time information management program for managing input position information and the time information corresponding to the position information.

26. (Currently amended) A computer-readable distribution medium for providing a program, said program comprising:

a storing step for repeatedly storing data in a plurality of given states, wherein each of said given states is based on time information corresponding to a day and time at which said data is stored;

transmitting and receiving time of application in which an application corresponding to an application program is performed, to and from another application program;

a day and time setting step for setting ~~a desired~~ the day and time based on said time of application received from said another application program;

a locating step for locating data stored at said set day and time based on said time information; and

a control step for reproducing said given state of said data corresponding to said set day and time.

27. (Currently amended) A distribution medium according to claim 26, wherein said storing step repeatedly stores a file in a plurality of given states each time said file is created or changed, wherein each of said given states is based on time information corresponding to a day and time at which said file is stored, said day and time setting step sets the day and time according to a past or future screen, said locating step locates a file stored at said set day and time based on said time ~~information~~ of application, and said control step reproduces said given state of said file corresponding to said set day and time along with said corresponding past or future screen.

28. Canceled.
